

## User's manual:

# City Lion external battery for Kugoo M4 / M4 PRO

**Our batteries are charged to 54.6V before shipment. To start assembling, your battery needs to be charged to a similar level.**

To install the additional CityLion battery in the Kugoo M4 / M4 PRO scooter:

- 1)** Fasten the bag on the handlebar with Velcro and clamps.
- 2)** Pass the cable through the platform cover where the brake cables/hoses enter it - on the front of the platform.

It may be necessary to enlarge this hole using a nail heated above the gas stove and held with pliers/soldering iron. The platform cover is mounted using two Allen screws visible from the bottom of the platform.

- 3)** When the cable is routed, remove the platform cover (from the bottom), remove the plastic elements that wedge the battery in the platform, and slide it out of the place to have access to the yellow plug (XT60), which connects the battery to the controller.
- 4)** Disconnect the yellow XT60 plug.
- 5)** Connect the XT60 plug of the additional battery (male) cable to the original battery.
- 6)** Connect the CityLion battery to the extension cable in the bag attached to the handlebar.
- 7)** Connect the female XT60 plug of the extension cable to the scooter controller.
- 8)** Place the battery in its original place, screw the battery cover on the bottom of the platform and the one on its front in place.
- 9)** Enjoy :)
